

Bring real-world climate modelling into your GIS classroom

Evaluate the new SimClim Toolkit for ArcGIS Pro for your classes and research. **Register for our upcoming informational webinar to secure beta access.**

Frustrated with helping students toggle between software platforms or wrestle with complex data reports? The SimClim Toolkit for ArcGIS Pro add-in brings robust climate change projection into their native GIS environment so you can focus on teaching. **Join our educator preview webinar.**

Perks of joining our SimClim Toolkit for ArcGIS Pro beta program

- **Assess classroom suitability:** See how easily a fully functional climate modelling tool can integrate into existing lab assignments, capstone projects, or academic research.
- **Empower your students:** Give students hands-on experience simulating extreme events and climate scenarios without toggling between different software platforms.
- **100% free:** Our educator beta program is free to join — no budget approvals or credit card information needed.
